Operating Systems

2. Download text file `test01.txt` in directory `test`.

1. Copy **test01.txt** to **text01**
2. Create in directory **test** a hard link named **t1** to **text01**
3. Create in directory **bin** a hard link named **t2** to **t1**
4. List all files, and their attributes, in **ex1** and its subdirectories
5. Explain the meaning of the number of links associated to each file or directory.
6. Remove file **text01**, and display the content of **t2.** Does it work? Why?
